PDO THREADS

WHAT ARE THEY

PDO (Polydioxanone) Threads enable an effective cosmetic technique that lifts and tightens sagging skin tissues by inducing collagen production. This lifting method involves the implantation of multiple, fine Polydioxanone (PDO) threads into the subcutaneous layer of the skin, which creates a vectoral network that acts as a support for the tissue. PDO Threads have been widely used in the medical field for over a decade.

Once implanted into the skin, the threads produce an immediate, visible lifting effect while also supporting natural collagen production. After the short (30–90 minute) procedure, your skin will feel rejuvenated, bringing vitality, elasticity, and a brighter complexion. The lifting effect is at its peak after six months via biological (enzymatic) absorption or hydrolysis, at which point the threads begin to be absorbed into the body, leaving new collagen in their place.

TREATMENT BENEFITS

Intraline PDO Threads present an excellent treatment option for combatting facial ageing, skin stress, and other related concerns. Our threads form part of an integrated support structure for the tissue of the face and body due to collagen synthesis, which biologically rejuvenates the quality of the skin and slows down the ageing process.

- Lift and reposition underlying ageing tissue to form an integrated support structure and increase collagen synthesis to achieve a more youthful appearance.

- Improve skin laxity, reduce pore size and enhance overall skin tone. Based on the patient's age and lifestyle, results can last from 1–2 years*.

- Stimulate the hypodermis, naturally regenerating the production of collagen, elastin, and hyaluronic acid, while also accelerating skin metabolism.

- Collagen regeneration accelerates over time, improving the appearance of wrinkles and folds, enhancing elasticity, brightening the patient's complexion, and improving the appearance of ageing skin.

- Improves blood and lymph circulation. The results are a significant improvement in the complexion and skin texture, providing a more relaxed, rested appearance.

- Implanted threads stimulate the macrophages, which can aid the natural healing process by reducing inflammation and triggering the immune system. Activation of lymph channels and circulation helps mobilize and eliminate fatty deposits.

**Results vary based on the patient's age, lifestyle and other factors*

DERMAL FILLERS

Not all Dermal Fillers are created equal. Intraline's Dermal Fillers have been developed utilizing the finest ingredients and specifically formulated at a molecular level to provide the smoothest, most natural results available today.

Produced through a proprietary bacterial fermentation process and never animal-derived, Intraline's Hyaluronic Acid is both effective and environmentally responsible. Following years of Swedish research, Intraline's Dermal Fillers utilize our innovative spherification technology, which smoothes HA's traditionally angular rhomboid molecular structure. This formulation technique provides Intraline's fillers with some of the highest molecular densities of any product on the market today, leading to smoother, more natural results than ever before possible.

Intraline® One can be used for treatment of medium deep wrinkles in the frown lines, nasolabial folds, cupid's bow, and labial commissure. Injections are administered at the mid-dermis level as the product consists of medium-sized molecular spheres.

Intraline® Two can be used to treat deep-set wrinkles, as well as for facial contouring and lip enhancement. Injections are administered at the mid-dermis to deep-dermis level as the product consists of large molecular spheres.

Intraline for Men is focused on treatment for deep-set wrinkles, facial contouring, mandible, frown lines, forehead lines, and much more. Injections are administered at the mid-dermis to deep-dermis level as the product consists of large molecular spheres.

ONE

INTRALINE ONE

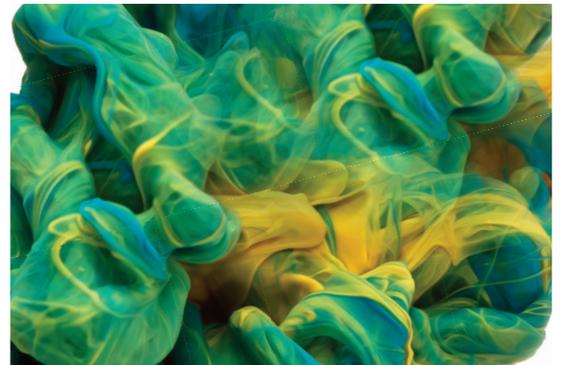

Used to treat tear troughs, glabella, perioral "smoker's lines"; cupid's bow and lips for enhancement or subtle definition; marionette lines, nasolabial folds, and crow's feet/fine lines.

TWO

INTRALINE TWO

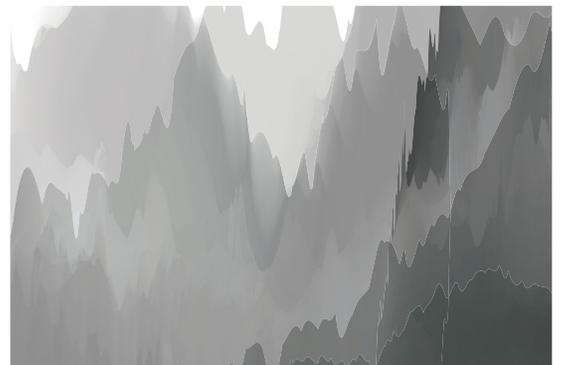

Used to treat deep-set wrinkles, marionette lines, nasolabial folds, perioral "smoker's lines"; cupid's bow and lips (high definition). Intraline Two can also be used in nonsurgical rhinoplasty, cheeks, and facial contouring, in addition to treatments for chin and jawline enhancement.

FOR MEN

INTRALINE FOR MEN

Intraline for Men is focused on treatment for deep-set wrinkles, facial contouring, mandible, frown lines, forehead lines, and much more. Injections are administered at the mid-dermis to deep-dermis level as the product consists of large molecular spheres.

INTRALINE SCAR KIT BY DR. OLIVER AMAR

The Scar Kit by Dr. Olivier Amar was designed to bring an easy and accessible solution to GP's and Practitioners who see patients with hypertrophic or depressed cutaneous scarring. The kit is comprised of everything a practitioner will need to treat a scar during a normal patient consult and includes: gloves, products to sterilize and clean the area, the new GTI Cannula designed by Dr. Olivier Amar, and 1ml of Intraline TWO filler.

This GTI (Groove Tipped Injection) Cannula is designed to be safer than a sharp needle used in regular subcision. It reduces the risk of damage to important nerves or vessels, which might otherwise be at risk from a sharp cutting device. It passes through the tissue smoothly, only severing the scar or higher-density tissue, and allows for the injection of filler into the cavity area to plump and fill out the depression.

Subcision is a simple and safe procedure for very deep acne scarring that leaves depressions in the skin. It can also be used for longer surgical scars that have healed with fibrotic strands attached to the underlying subcutaneous tissues that pull the scar down, causing a depression in the skin. It is mainly useful for rolling scars and boxcar

scars (distensible, depressed scars with gently sloping edges). This procedure is not as successful for "ice pick" acne scars which look like large, deep pores.

"I designed the GTI Cannula® with Sterimedix and the Scar Kit with Intraline because there is a clear need for a safe and effective way to be able to treat patients with minor facial defects or scars without the need to use a needle or blade. The cannula is safe and can be used for the subcision and the injection of filler to lift the skin. The tip makes the device safer than the traditional methods but is highly effective in passing through the scar tissue to release the surface indentation. It can be used by all qualified aesthetic practitioners."

SKIN CARE

RESTORATIVE MOISTURIZER

Intraline's Restorative Moisturizer is designed to smooth and protect your skin, helping fight the visible signs of ageing. Formulated for all skin types, Intraline's cream features high molecular density Hyaluronic Acid and Sea Buckthorn Berry Oil, which benefit skin elasticity, water retention, and hydration.

Suggested Usage

For best results, it is recommended that Intraline's Restorative Moisturizer be applied to a clean face 1-2 times per day. Regular use may help reduce the effects of ageing due to environmental factors. If irritation occurs, please discontinue use and ensure one avoids contact with eyes.

Active Ingredients

Sea Buckthorn	Known to aid in alleviating sunburns; healing wounds, including burns and cuts; treating acne, dermatitis, dry skin, eczema, and changes in skin colour; protecting mucus membranes. Sea Buckthorn contains vitamins A, B1, B2, B6, C, and other active ingredients.
Vitamin A	Reduces oily skin
Vitamin B1	Develops myelin sheaths (protective covering of the nerves)
Vitamin B2	Helps with dry and itchy skin
Vitamin B6	Helps prevent and treat acne
Vitamin C	Reduces brown spots, boosts healthy collagen production, and reduces inflammation and irritation

BIOCELLULOSE SNOW LOTUS EXTRACT REPLENISHING MASQUES

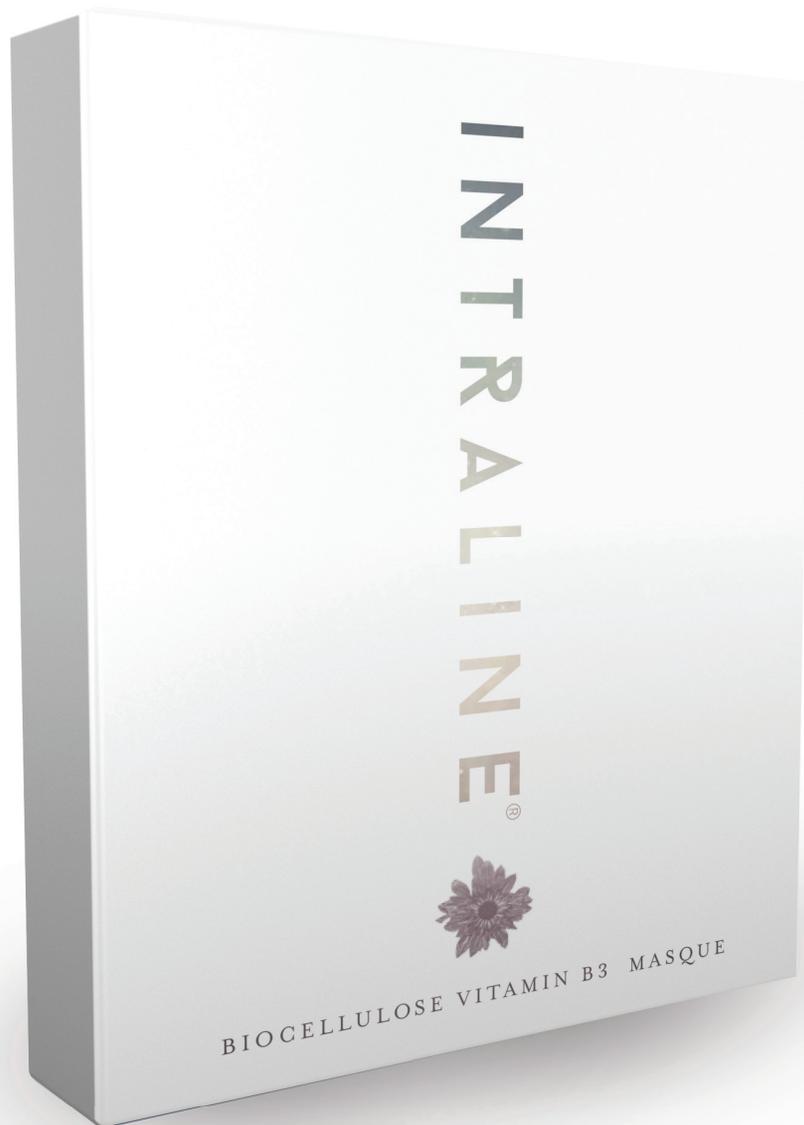

The masque features a natural biocellulose sheet, Hyaluronic Acid, Niacinamide, and Snow Lotus Extract. Together, these provide significant facial rejuvenation benefits you can add to your weekly skin routine. They also complement Intraline's other treatments, such as aiding in the healing process for our PDO threads and dermal fillers. The use of biocellulose sheets aids in superior adherence and absorption; Hyaluronic Acid adds skin elasticity and hydration; Niacinamide lightens blemishes and unwanted dark spots; Snow Lotus is known to aid in brightening dull and coarse skin. This product will improve the look of your skin by adding moisture and lightening blemishes, all while giving you the feeling of a soothing and light face masque.

Our packaging expresses how light and refreshing the product is, with the subtle essence of Snow Lotus. The pack includes four masques, and it is recommended to use the masque once a week for four consecutive weeks for optimal results.

Product Advantages:

Formulated with 30,000ppm of Snow Lotus Extract, the Vitamin B3 Masque brightens dark spots and blemishes and soothes dull looking skin.

Using third generation biocellulose sheets infused with Hyaluronic Acid and Vitamin B3 allows superior absorption of the essential ingredients to intensely hydrate stressed, dehydrated skin. Our masques are enriched with the powerful anti-ageing plant complexes Oldenlandiae, Pomegranate, Peony, Snow Lotus Extract, and Vitamin E, all of which combine to moisturize, renew, and rejuvenate the skin.
